pureXML is the native XML storage feature in the IBM DB2 data server. pureXML provides query languages, storage technologies, indexing technologies, and other features to support XML data.The word pure in pureXML was chosen to indicate that DB2 natively stores and natively processes XML data in its inherent hierarchical structure, as opposed to treating XML data as plain text or converting it ...

### pureXML - Wikipedia

However, Db2 does control the association between users and roles when a trusted context is defined. Db2 uses authorization IDs to provide authorization checking of SQL statements. Whenever a connection is established between Db2 and a process, Db2 obtains an authorization ID and passes it to the authorization connection or sign-on exit routine.
