The new DIN 12880 sets the standards for modern ovens and incubators. When comparing details of individual manufacturers concerning heating up and cooling down times, temperature homogeneity and temperature consistency, as well as the recovery times after the door has been opened, you should always take into account the underlying test standard.

DIN 12880 - Memmert GmbH + Co. KG

The standard specifies performance requirements and tests for heating cabinets and incubators in laboratories. The standard applies for cabinets and incubators with a working temperature range from -10 °C to 300 °C and includes shaking incubators.

DIN 12880:2007-05 - Normadoc

Recovery time after opening the door. At the highest test temperature and when the temperature has stabilised, the door of the oven is opened for 30 seconds and then the time is measured until the actual temperature in the middle of the working space remains permanently within the limit deviation specified in DIN 12880:2007-05.

DIN 12880: recovery time after door opening
