### Nano (NANO)-whitepaper - Whitepaper Database

While Raiblocks transfers are technically free to the network, there is a cost on the sender and receiver, but its pretty damn low. I 100% agree that no matter what happens with the node incentives, if it keeps working this fast and this cheap and with even HALF of the massive scale they promise, this coin certainly could (and should) become ...

### Thoughts about Raiblocks Whitepaper? : CryptoTechnology

What is Raiblocks? Raiblocks is yet one more exchange platform for cryptocurrencies that is based on blockchain technology. As of now it is in Node Version 8.0 with 4,407,264 Blocks and they claim that distribution is complete. Raiblocks is designed to help make scalable, instant transaction from the ground up with zero transaction fees.

### Raiblocks - XRB ICO Scalable Instant Zero-Fee Transactions ...

RaiBlocks operates on a crypto architecture they call "block lattice". They provide a nice wiki page where they describe how this works. The gist of it is that RaiBlocks isn't just one long blockchain, like Bitcoin or Ethereum; it is a database of blockchains where each user (or address) gets their own blockchain that only they can add onto.

### **IOTA vs NANO (RaiBlocks) | Hacker Noon**

Nano is decentralized, sustainable, and secure digital money focused on addressing the inefficiencies present in existing financial systems. Uniquely designed to provide simple peer-to-peer transfer of value, Nano empowers individuals with the most efficient and accessible digital money possible, connecting them to the global economy with minimal impact.

### **frequently asked questions - RaiBlocks**

Nano, formerly RaiBlocks, is a cryptocurrency. It is a decentralized, open-source, peer-to-peer digital currency, based on directed acyclic graph technology, and released under the FreeBSD License. It has feeless transactions that typically achieve full confirmation in 1–10 seconds, without intermediaries, by utilizing a distributed ledger with a block-lattice data structure. Officially announced in October 2015 by Colin LeMahieu, Nano's goal is to address blockchain scalability ...

### **Nano (cryptocurrency) - Wikipedia**

I read the RaiBlocks whitepaper and got ideas about some attacks not mentioned in it. One of the attacks can be fatal if it can be conducted, but I have a method of assessing its feasibility. Of course, I can't accept XRB as the bounty payment, it makes little sense to accept XRB if I'm planning to conduct an attack and expect it to succeed.

### **RaiBlocks: Криптовалютная Сеть Без Комиссий**

RaiBlocks secure's its ledger via delegated proof of stake (dPoS). In order to perform malicious actions on the RaiBlocks block-lattice, an attacker would have to possess >50% of the online voting power. Such an attack would spoil their large financial investment, and as such not an attractive option.

### **What Is Railblocks?**

The RaiBlocks whitepaper is worth reading just as a reference on how a technical paper should be written. (Disclosure: I became interested in RAI on NYE and recently invested some money in it)
